

ADVANCED STRUCTURAL ANALYSIS

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER - II

Subject Code	20CSE11	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS - 04

Prerequisites:

- Strength of Materials
- Structural Analysis

Course objectives:

Students will be given provided with the knowledge of mathematics, science, and engineering in the in the analysis of following structural systems curved beams, Beams on elastic foundation, shear centre and unsymmetrical bending and buckling of non-prismatic columns and beam column.

Modules	Teaching Hours	RBT Level
Module-1		
Curved Beams Curved beams, Introduction, assumptions, derivation of WINKLER BACH equation, Radius to the neutral surface of simple geometric figures, Limitation, Stress distribution in open curved members such as Hooks and chain links, Stress distribution in closed rings and chain links. Deformations of open and closed rings.	10 Hours	
Module-2		
Beams on Elastic Foundations Governing differential equation for elastic line, Interpretation of constants, Infinite beam with point load, moment & UDL with problems. Semi-infinite beams with point load and moment UDL with problems over fixed and hinged support conditions.	10 Hours	

Module -3		
Shear Centre Concept of shear center in torsion induced bending of beams, expression to the Shear Centre for Symmetrical and Unsymmetrical Sections, Derivation of shear centre for angles, channel, semicircular and built-up sections with numerical problems	10 Hours	
Module -4		
Unsymmetrical Bending (Asymmetrical Bending) Theory behind unsymmetrical bending, Assumptions, obtaining the stresses in beams, simply supported and cantilever unsymmetrical beams subjected to inclined loading, Deflections of unsymmetrical simply supported and cantilever beams with numerical problems.	10 Hours	
Module -5		
Buckling of Non Prismatic Columns and Beam-Column Principle behind Euler's theory of buckling, Governing differential equation applied to buckling of columns and evaluation of constants for various boundary conditions, Obtaining the characteristic equation for the buckling load of non-prismatic compound columns, Analysis of Beam-column, conceptual theory of magnification stresses and deformations subjected to axial and different types of lateral loads with numerical problems.	10 Hours	
Course Outcomes: Students will be able to <ul style="list-style-type: none"> • Apply Winkler Bach and Strain Energy principles to obtain stresses and deformation in curved members • Derive the expressions to Foundation pressure, Deflection, Slope, BM and SF of infinite and semi-infinite Beams resting on Elastic Foundation • Obtain the equations for the shear centre for symmetrical and unsymmetrical from fundamental. • Extrapolate the bending theory to calculate the stresses and deformations in unsymmetrical bending. • Develop the characteristic equation for the buckling load of compound column and stresses and deformations in beam-column 		

Question paper pattern:

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

ADVANCED DESIGN OF RC STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	20CSE13	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 04

Prerequisites: An undergraduate course on reinforced concrete.

Course objectives:

The objective of this course is to make students to learn principles of Structural Design, to design different types of structures and to detail the structures. To evaluate performance of the structures

Modules	Teaching Hours	RBT Level
Module-1		
<ul style="list-style-type: none">• Design of R C slabs by yield line method• Design of flat slabs	8 Hours	L1, L2, L3, L4, L5
Module-2		
<ul style="list-style-type: none">• Design of grid or coffered floors• Design of continuous beams with redistribution of moments	8 Hours	L1, L2, L3, L4, L5
Module -3		
<ul style="list-style-type: none">• Design of R C Chimneys	8 Hours	L1, L2, L3, L4,
Module -4		
<ul style="list-style-type: none">• Design of R C silos• Design of R C bunkers	8 Hours	L1, L2, L4, L5
Module -5		
Formwork: Introduction, Requirements of good formwork, Materials for forms, choice of formwork, Loads on formwork, Permissible stresses for timber, Design of formwork, Shuttering for columns, Shuttering for slabs and beams, Erection of Formwork, Action prior to and during concreting, Striking of forms. Recent developments in form work.	8 Hours	L1, L2

Course outcomes:

On completion of this course, students are able to:

1. Achieve Knowledge of design and development of problem solving skills
2. Understand the principles of Structural Design.
3. Design and develop analytical skills.
4. Summarize the principles of Structural Design and detailing
5. Understands the structural performance.

Question paper pattern:

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

MECHANICS OF DEFORMABLE BODIES
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	20CSE14	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 04

Prerequisites:

Basics of Mathematics, Strength of Materials

Course objectives:

Course objectives: The objective of this course is to make students to learn principles of Analysis of Stress and Strain, To predict the stress-strain behaviour of continuum. To evaluate the stress and strain parameters and their inter relations of the continuum

Modules	Teaching Hours	RBT Level
Module-1		
Theory of Elasticity: Introduction: Definition of stress and strain and strain at a point, components of stress and strain at appoint of Cartesian and polar coordinates. Constitutive relations, equilibrium equations, compatibility equations and boundary conditions in 2-D and 3-D cases.	8 Hours	L1, L2
Module-2		
Transformation of stress and strain at a point, Principal stresses and principal strains, invariants of stress and strain, hydrostatic and deviatric stress, spherical and deviatric strains max. shear strain.	8 Hours	L2, L3
Module -3		
Plane stress and plane strain: Airy's stress function approach to 2-D problems of elasticity, simple problems of bending of beams. Solution of axisymmetric problems, stress concentration due to the presence of a circular hole in plates.	8 Hours	L2, L3
Module -4		

Elementary problems of elasticity in three dimensions, stretching of a prismatic bar by its own weight, twist of circular shafts, torsion of non-circular sections, membrane analogy, Propagation of waves in solid media. Applications of finite difference equations in elasticity.	8 Hours	L2, L3, L4
Module -5		
Theory of Plasticity: Stress – strain diagram in simple tension, perfectly elastic, Rigid – Perfectly plastic, Linear work – hardening, Elastic Perfectly plastic, Elastic Linear work hardening materials, Failure theories, yield conditions, stress – space representation of yield criteria through Westergard stress space, Tresca and Von-Mises criteria of yielding	8 Hours	L1, L2
<p>Course outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of stress-strain behaviour of continuum • Design and develop analytical skills. • Describe the continuum in 2 and 3- dimensions • Understand the concepts of elasticity and plasticity 		
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>		
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Timoshenko & Goodier, “Theory of Elasticity”, McGraw Hill 2. Valliappan C, “Continuum Mechanics Fundamentals”, Oxford IBH Publishing Co.Ltd. 7. Sadhu Singh, “Applied Stress Analysis”, Khanna Publishers 8. Xi Lu, “Theory of Elasticity”, John Wiley. 		

STRUCTURAL DYNAMICS

[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	20CSE15	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 04

Course objectives:

The objective of this course is to make students to learn principles of Structural Dynamics, To implement these principles through different methods and to apply the same for free and forced vibration of structures. To evaluate the dynamic characteristics of the structures

Modules	Teaching Hours	RBT Level
Module-1		
<p>Introduction: Introduction to Dynamic problems in Civil Engineering, Concept of degrees of freedom, D'Alembert's principle, principle of virtual displacement and energy principles .</p> <p>Dynamics of Single degree-of-freedom systems: Mathematical models of Single-degree-of-freedom systems system, Free vibration response of damped and undamped systems including methods for evaluation of damping.</p>	8 Hours	L₁, L₂, L₅
Module-2		
<p>Response of Single-degree-of-freedom systems to harmonic loading including support motion, vibration isolation, transmissibility.</p> <p>Numerical methods applied to Single-degree-of-freedom systems – Duhamel integral.</p> <p>Principle of vibration measuring instruments– seismometer and accelerometer.</p>	8 Hours	L₃, L₄, L₅
Module -3		
<p>Dynamics of Multi-degree freedom systems: Mathematical models of multi-degree-of-freedom systems, Shear building concept, free vibration of undamped multi-degree-of-freedom systems – Natural frequencies and mode shapes – Orthogonality of modes.</p>	8 Hours	L₁, L₂, L₄, L₅

Module -4		
Response of Shear buildings for harmonic loading without damping using normal mode approach. Response of Shear buildings for forced vibration for harmonic loading with damping using normal mode approach.	8 Hours	L₃, L₄, L₅
Module -5		
Approximate methods: Rayleigh's method, Dunkarley's method, Stodola's method. Dynamics of Continuous systems: Flexural vibration of beams with different end conditions. Stiffness matrix, mass matrix (lumped and consistent).	8 Hours	L₂, L₄
<p>Course outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problems solving skills. • Understand the principles of Structural Dynamics • Design and develop analytical skills. • Summarize the Solution techniques for dynamics of Multi-degree freedom systems • Understand the concepts of damping in structures. 		
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>		
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Dynamics of Structures – “Theory and Application to Earthquake Engineering”- 2nd ed., Anil K. Chopra, Pearson Education. 2. Earthquake Resistant Design of Building Structures, Vinod Hosur, WILEY (India) 3. Vibrations, structural dynamics- M. Mukhopadhaya : Oxford IBH 4. Structural Dynamics- Mario Paz: CBS publishers. 5. STRUCTURAL ENGINEERING LAB-1 [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Subject Code	20CSEL16	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	1:3:0	SEE Marks	60
Total Number of Lecture Hours	42	Exam Hours	03
CREDITS – 02			
Prerequisites: Concrete Technology, Special Concrete, Structural Analysis, Structural Dynamics			
Course objectives: The objective of this course is to make students to learn principles of design of experiments, To investigate the performance of structural elements. To evaluate the different testing methods and equipments.			
Modules	Teaching Hours	RBT Level	
1. Experiments on Concrete, including Mix design	12 Hrs	L1, L2, L3, L4, L5, L6	
2. Testing of beams for deflection, flexure and shear	12 Hrs		
3. Experiments on vibration of multi storey frame models for Natural frequency and modes.	12 Hrs		
4. Use of Non destructive testing (NDT) equipments – Rebound hammer, Ultra sonic pulse velocity meter and Profometer	06Hrs		
Course outcomes: On complete of this course the students will able to <ul style="list-style-type: none"> • Achieve Knowledge of design and development of experimenting skills. • Understand the principles of design of experiments • Design and develop analytical skills. • Summarize the testing methods and equipment's. 			

RESEARCH METHODOLOGY AND IPR

Course Code	20RMI17	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	1:0:2	SEE Marks	60
Credits	02	Exam Hours	03

Module-1

Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India.

Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration. ■

Module-2

Reviewing the literature: Place of the literature review in research, Bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed. **Research Design:** Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs. ■

Module-3

Design of Sampling: Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs.

Measurement and Scaling: Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Technics, Multidimensional Scaling, Deciding the Scale.

Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method. ■

Module-4

Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis.

Chi-square Test: Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, Cautions in Using Chi Square Tests. ■

Module-5

Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor

Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout- Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property Rights, UNSECO. ■

Course outcomes:

At the end of the course the student will be able to:

- Discuss research methodology and the technique of defining a research problem
- Explain the functions of the literature review in research, carrying out a literature search, developing theoretical and conceptual frameworks and writing a review.
- Explain various research designs, sampling designs, measurement and scaling techniques and also different methods of data collections.
- Explain several parametric tests of hypotheses, Chi-square test, art of interpretation and writing research reports
- Discuss various forms of the intellectual property, its relevance and business impact in the changing global business environment and leading International Instruments concerning IPR.

■

Question paper pattern:

- The question paper will have ten questions.
- Each full question is for 20 marks.
- There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.
- Each full question with sub questions will cover the contents under a module.
- Students will have to answer 5 full questions, selecting one full question from each module. ■

Textbooks

1. Research Methodology: Methods and Techniques, C.R. Kothari, Gaurav Garg, New Age International, 4th Edition, 2018.
2. Research Methodology a step-by-step guide for beginners. Ranjit Kumar, SAGE Publications, 3rd Edition, 2011. (For the topic Reviewing the literature under module 2),
3. Study Material, (For the topic Intellectual Property under module 5), Professional Programme Intellectual
4. Property Rights, Law and Practice, The Institute of Company Secretaries of India, Statutory Body Under an Act of Parliament, September 2013.

ADVANCED DESIGN OF STEEL STRUCTURES
 [As per Choice Based Credit System (CBCS) scheme]
SEMESTER – II

Subject Code	20CSE21	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 04

Prerequisites:

- Engineering Mechanics
- Strength of Materials
- Structural Analysis
- Design of Steel structures

Course objectives: This course will enable students to

1. Understand the background to the design provisions for hot-rolled and cold-formed steel structures, including the main differences between them.
2. Proficiency in applying the provisions for design of columns, beams, beam-columns
3. Design structural sections for adequate fire resistance

Modules	Teaching Hours	RBT Level
Module-1		
<p>Laterally Unrestrained Beams:</p> <p>Lateral Buckling of Beams, Factors affecting lateral stability, IS 800 code provisions, Design Approach. Lateral buckling strength of Cantilever beams, continuous beams, beams with continuous and discrete lateral restraints ,Mono-symmetric and non-uniform beams – Design Examples. Concepts of -Shear Center, Warping, Uniform and Non-Uniform torsion.</p>	8 Hours	
Module-2		
<p>Beam- Columns in Frames:</p> <p>Behaviour of Short and Long Beam - Columns, Effects of Slenderness Ratio and Axial Force on Modes of Failure, Biaxial bending, Strength of Beam Columns, Sway and Non-Sway Frames, Strength and Stability of rigid jointed frames, Effective Length of Columns-, Methods in IS 800 - Examples</p>	8 Hours	

Module -3		
Steel Beams with Web Openings: Shape of the web openings, practical guide lines, and Force distribution and failure patterns. Analysis of beams with perforated thin and thick webs, Design of laterally restrained castellated beams for given sectional properties. Vierendeel girders (design for given analysis results)	8 Hours	
Module -4		
Cold formed steel sections: Techniques and properties, Advantages, Typical profiles, Stiffened and unstiffened elements, Local buckling effects, effective section properties, IS 801& 811 code provisions-numerical examples, beam design, column design.	8 Hours	
Module -5		
Fire resistance: Fire resistance level, Period of Structural Adequacy, Properties of steel with temperature, Limiting Steel temperature, Protected and unprotected members, Methods of fire protection, Fire resistance Ratings. Numerical Examples.	8 Hours	
Course outcomes: After studying this course, students will be able to: <ul style="list-style-type: none"> • Able to understand behavior of Light gauge steel members • Able to understand design concepts of cold formed/unrestrained beams • Able to understand Fire resistance concept required for present days. • Able to analyze beam column behavior 		
Question paper pattern: IS 800: 2007, IS 801-2010, IS811-1987 and BS5950 – part 8 to be allowed along with Steel Tables in Exam. The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.		
Reference Books: <ol style="list-style-type: none"> 1. N. Subramanian, “Design of Steel Structures”, Oxford, IBH 2. Duggal,S.K. Design of Steel Structures, Tata McGraw-Hill 3. IS 800: 2007, IS 801-2010 , IS 811-1987 4. BS5950 Part- 8, 5. INSDAG Teaching Resource Chapter 11 to 20:www.steel-insdag.org 6. SP 6 (5)-1980 		

FINITE ELEMENT METHOD OF ANALYSIS

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

Subject Code	20CSE22	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 04

Prerequisites:

- Computational structural Mechanics
- Theory of Elasticity

Course objectives:

- To provide the fundamental concepts of the theory of the finite element method
- To develop proficiency in the application of the finite element method (modeling, analysis, and interpretation of results) to realistic engineering problems through the use of softwares

Modules	Teaching Hours	RBT Level
Module-1		
Basic concepts of elasticity, Kinematic and Static variables for various types of structural problems, approximate methods of structural analysis–Rayleigh–Ritz method, Finite difference method, Finite element method. Variation method and minimization of Energy approach of element formulation, Principles of finite element method, advantages and disadvantages, Finite element procedure, Finite elements used for one, two and three dimensional problems, C0, C1 and C2 type elements, Element aspect ratio, Mesh refinement vs. higher order elements, Numbering of nodes to minimize bandwidth.	8 Hours	L1, L2
Module-2		
Nodal displacement parameters, Convergence criterion, Compatibility requirements, Geometric invariance, Shape function, Polynomial form of displacement function, Generalized and Natural coordinates, Lagrangian interpolation function, shape functions for one, two & three	8 Hours	L1, L2, L4, L5

dimensional elements.		
Module -3		
Isoparametric elements, Internal nodes and higher order elements, Serendipity and Lagrangian family of Finite Elements, Sub-parametric and Super- parametric elements, Condensation of internal nodes, Jacobian transformation Matrix, Development of strain-displacement matrix and stiffness matrix, consistent load vector, numerical integration.	8 Hours	L1, L2, L4, L5
Module -4		
Application of Finite Element Method for the analysis of one & two dimensional problems: Analysis of plane trusses and beams, Application to plane stress/strain, Axisymmetric problems using CST and Quadrilateral Elements	8 Hours	L1, L2, L3, L4, L5
Module -5		
Application to Plates and Shells, Non-linearity: material, geometric and combined non- linearity, Techniques for Non-linear Analysis.	8 Hours	L1, L2
<p>Course Outcome:</p> <p>After successful completion of this the course, students shall be able to:</p> <ul style="list-style-type: none"> • Explain the basic theory behind the finite element method. • Formulate force-displacements relations for 2-D elements • Use the finite element method to analyze real structures. • Use a Finite Element based program for structural analysis 		
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>		
<p>Reference Books:</p> <ul style="list-style-type: none"> • Zeinkeiwich, O.C. and Tayler, R.L., The Finite Element Method for Solid and Structural Mechanics, Butterworth-Heinemann,2013 • Krishnamoorthy,C.S., Finite Element Analysis: Theory and programming, Tata McGraw Hill Publishing Co. EARTHQUAKE RESISTANT STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER - II

Subject Code	20CSE23	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS - 04

Prerequisites:

- Structural Dynamics

Course objectives:

The objective of this course is to make students to learn principles of engineering seismology, To design the reinforced concrete buildings for earthquake resistance. To evaluate the seismic response of the structures

Modules	Teaching Hours	RBT Level
Module-1		
Introduction to engineering seismology, Geological and tectonic features of India, Origin and propagation of seismic waves, characteristics of earthquake and its quantification – Magnitude and Intensity scales, seismic instruments. Earthquake Hazards in India, Earthquake Risk Evaluation and Mitigation. Structural behavior under gravity and seismic loads, Lateral load resisting structural systems, Requirements of efficient earthquake resistant structural system, damping devices, base isolation systems.	8 Hours	L1, L2
Module-2		
The Response history and strong motion characteristics. Response Spectrum – elastic and inelastic response spectra, tripartite (D-V-A) response spectrum, use of response spectrum in earthquake resistant design. Computation of seismic forces in multi-storied buildings – using procedures (Equivalent lateral force and dynamic analysis) as per IS-1893.	8 Hours	L2, L3, L4, L5
Module -3		

Structural Configuration for earthquake resistant design, Concept of plan irregularities and vertical irregularities, Soft storey, Torsion in buildings. Design provisions for these in IS-1893. Effect of infill masonry walls on frames, modeling concepts of infill masonry walls. Behaviour of masonry buildings during earthquakes, failure patterns, strength of masonry in shear and flexure, Slenderness concept of masonry walls, concepts for earthquake resistant masonry buildings – codal provisions.	8 Hours	L2, L4, L5
Module -4		
Design of Reinforced concrete buildings for earthquake resistance-Load combinations, Ductility and energy absorption in buildings. Confinement of concrete for ductility, design of columns and beams for ductility, ductile detailing provisions as per IS1893. Structural behavior, design and ductile detailing of shear walls.	8 Hours	L2, L4, L5
Module -5		
Seismic response control concepts – Seismic demand, seismic capacity, Overview of linear and nonlinear procedures of seismic analysis. Performance Based Seismic Engineering methodology, Seismic evaluation and retrofitting of structures.	8 Hours	L2, L5, L6
<p>Course Outcome: On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of engineering seismology • Design and develop analytical skills. • Summarize the Seismic evaluation and retrofitting of structures. • Understand the concepts of earthquake resistance of reinforced concrete buildings. 		
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>		
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Dynamics of Structures – Theory and Application to Earthquake Engineering- 2nd ed. – Anil K. Chopra, Pearson Education.

7. Seismic Design of Reinforced Concrete and Masonry Buildings, T Paulay and M J N Priestley, John Wiley and Sons.

ANALYSIS AND DESIGN OF PLATES AND SHELLS

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER - II

Subject Code	20CSE241	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS - 04

Prerequisites:**Course objectives:**

The objective of this course is to make students to learn different methods of analysis and design of plates and shells, To critically detail the plates, folded plates and shells. To evaluate the performance of spatial structures.

Modules	Teaching Hours	RBT Level
Module-1		
Introduction to plate theory, Small deflection of laterally loaded thin rectangular plates for pure bending. Navier's and Levy's solution for various lateral loading and boundary conditions (No derivation), Numerical examples	10 Hours	L1, L2
Module-2		
Energy methods for rectangular and circular plates with clamped edges subjected to symmetric loadings.	10 Hours	L2, L3
Module -3		
Introduction to curved surfaces and classification of shells, Membrane theory of spherical shells, cylindrical shells, hyperbolic paraboloids, elliptic paraboloid and conoids	10 Hours	L2, L3
Module -4		
Axially symmetric bending of shells of revolution, Closed cylindrical shells, water tanks, spherical shells and Geckler's approximation. Bending theory of doubly curved shallow shells.	10 Hours	L2, L3
Module -5		

Design and detailing of folded plates with numerical examples Design and Detailing of simple shell problems – spherical domes, water tanks, barrel vaults and hyperbolic paraboloid roofs	10 Hours	L2, L3, L4
<p>Course outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of Analysis and Design • Design and develop analytical skills. • Summarize the performance of shells • Understand the concepts of energy principle. 		
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 		
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Timoshenko, S. and Woinowsky-Krieger, W., “Theory of Plates and Shells” 2nd Edition, McGraw-Hill Co., New York, 1959 2. Design of Precast & Composite Structures

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject Code	20CSE242	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 04

Prerequisites:

Basics of Strength of materials, Structural Analysis

Course objectives:

1. Understand the concepts and techniques of precast construction and Select or design precast elements suitable for project specific requirements
2. Design precast systems to ensure integrity and safety of the structure and to avoid progressive collapse and Design composite floors and beam elements

Modules	Teaching Hours	RBT Level
Module-1		
Concepts , components, Structural Systems and Design of precast concrete floors Need and types of precast construction, Modular coordination, Precast elements- Floor, Beams, Columns and walls. Structural Systems and connections. Design of precast Concrete Floors: Theoretical and Design Examples of Hollow core slabs,. Precast Concrete Planks, floor with composite toppings with and without props.	8 Hours	L1,L2
Module-2		
Design of precast reinforced and prestressed Concrete beams Theoretical and Design Examples of ITB – Full section precast, Semi Precast, propped and unpropped conditions. Design of RC Nibs	8 Hours	L3,L4
Module -3		
Design of precast concrete columns and walls	8 Hours	L3,L4

Design of braced and unbraced columns with corbels subjected to pattern and full loading. Design of Corbels Design of RC walls subjected to Vertical, Horizontal loads and moments, Design of vertical ties and horizontal joints.		
Module -4		
Design of Precast Connections and Structural Integrity Beam bearing, Beam half Joint, Steel Inserts, Socket Connection, Structural integrity, Avoidance of progressive collapse, Design of Structural Ties.	8 Hours	L3,L4
Module -5		
Design of Steel Concrete Composite Floors and Beams Composite Floors: Profiled Sheeting with concrete topping, Design method, Bending and Shear Resistance of Composite Slabs, Serviceability Criteria, Design Example Composite Beams: Elastic Behaviour, Ultimate Load behavior of Composite beams, Stresses and deflection in service and vibration, Design Example of Simply Supported beams.	8 Hours	L3,L4
Course Outcomes:		
Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

ADVANCED CONCRETE TECHNOLOGY
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – II

Subject Code	20CSE243	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Prerequisites: Knowledge of Material Science and Concrete Technology

Course objectives: The objective of the course is to provide students to obtain an in-depth knowledge of a wide variety of advanced topics in concrete technology and practice. Concrete, being the popular materials for the construction material for civil infrastructure building, is undergoing significant changes in the recent times, in relation to the constituent materials used, production technology, testing methods and performance requirements.

Modules	Teaching Hours	RBT Level
Module-1		
<p>Fibre reinforced concrete: History, mechanism, different types of fibres, Aspect ratio, Volume of fibres, orientation of fibres, balling effect, properties of fibre reinforced concrete, applications of fibre reinforced concrete. Types of Fibre reinforced concrete.</p> <p>Ferro cement: Definition, different materials used, casting techniques, properties of Ferro cement, applications.</p>	10 Hours	
Module-2		
<p>Light Weight Concrete: Introduction, classification, properties, strength and durability, mix proportioning and problems</p> <p>High Density Concrete: Radiation shielding ability of concrete, materials for high density concrete, mix proportioning, properties in fresh and hardened state, placement methods.</p>	10 Hours	

Module -3		
<p>Ready mix concrete: Concept, ready mix concrete plants, difficulties faced and their solution , use of admixtures in ready mix concrete, economics and quality control aspects of ready mix concrete.</p> <p>High Performance Concrete: Constituents, mix proportioning, properties in fresh and hardened states, applications & limitations</p>	10 Hours	
Module -4		
<p>Polymer concrete: Polymers, resins, polymerization, different types of polymer concrete like polymer impregnated concrete, polymer concrete (Resin concrete) and polymer modified concrete, their properties and applications.</p> <p>Self-compacting concrete: Development of SCC, basic principles and requirements , workability tests for SCC, mix design of SCC, acceptance criteria for SCC, adoption of SCC in the precast industry, present status of SCC</p>	10 Hours	
Module -5		
<p>Concrete from Industrial wastes:</p> <ol style="list-style-type: none"> Blast furnace slag cement concrete Fly-ash concrete Silica fume concrete Recycled aggregate Concrete 	10 Hours	
<p>Course outcomes:</p> <ol style="list-style-type: none"> On complete of this course the students will able to understand the construction material, meeting the demanding performance requirements based on men, machines and materials. Innovative special concrete with mixes, applications and limitations Testing methods developed to increase the scope of concrete usage as an advanced material 		
<p>Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

ADVANCED DESIGN OF PRE-STRESSED CONCRETE STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER - II

Subject Code	20CSE244	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS - 04**Prerequisites:****Course objectives:**

This course will enable students to

- Design pre-stressed elements
- Understand the behavior of pre-stressed elements.
- Understand the behavior of pre-stressed sections

Modules	Teaching Hours	RBT Level
Module-1		
Shear and Torsional Resistance: Shear and principal stresses, ultimate shear resistance, design of shear reinforcement, Torsion, Design of reinforcement for torsion. Anchorage Zone Stresses in Post-Tensioned Members: Introduction, stress distribution in end block, investigations on Anchorage zone stresses, Magnel and Guyon's Methods, Comparative Analysis, Anchorage zone reinforcement.	10 Hours	L1, L2
Module-2		
Tension Members: Introduction, Ties, Pressure pipes – fabrication process, analysis, design and specifications. Cylindrical containers construction techniques, analysis, design and specifications. Compression Members: Introduction, Columns, short columns, long columns, biaxially loaded columns, Design specifications.	10 Hours	L2, L3

Module -3		
Statically indeterminate Structures: Introduction, Advantages of continuous members, effect of prestressing in indeterminate structures, methods of analysis for secondary moments, concordant cable profile, Guyon's theorem, Ultimate load analysis, Design of continuous beams and portal frames.	10 Hours	L2, L3, L4
Module -4		
Slab and Grid Floors: Types of floor slabs, Design of one way, two way and flat slabs. Distribution of prestressing tendons, Analysis and design of grid floors.	10 Hours	L1, L2, L3
Module -5		
Composite Beams: Introduction, types of composite beams, analysis for stresses, differential shrinkage, serviceability limit state. Design for flexural and shear strength.	10 Hours	L1, L2, L3
Precast Elements: Introduction, Prestressed concrete poles-manufacturing techniques, shapes and cross sectional properties, design loads, designs principles. Railway sleepers-classification and Manufacturing techniques, design loads, analysis and design principles. Prestressed concrete pavements, slab and wall panels.		
Course Outcomes: After studying this course, students will be able to: <ul style="list-style-type: none"> Analyse , Design and detail PSC elements 		
Question paper pattern: The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

DESIGN OF INDUSTRIAL STRUCTURES
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER - II

Subject Code	20CSE251	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS - 04			
Prerequisites:			
Course objectives: The objective of this course is to make students to learn principles of Design of industrial building, To design different components of industrial structures and to detail the structures. To evaluate the performance of the Pre-engineered buildings			
Modules		Teaching Hours	RBT Level
Module-1			
Analysis of industrial building for Gravity and Wind load. Analysis and design of framing components namely, girders, trusses, gable frames		10 Hours	L2, L3, L4
Module-2			
Analysis and design of gantry column (stepped column / column with bracket), purlins, girts, bracings including all connections.		10 Hours	L2, L3, L4
Module -3			
Analysis of transmission line towers for wind load and design of towers including all connections.		10 Hours	L2, L3, L4
Module -4			
Forms of light gauge sections, Effective width computation of unstiffened, stiffened, multiple stiffened compression elements of cold formed light gauge sections. Concept of local buckling of thin elements. Limiting width to thickness ratio. Post buckling strength.		10 Hours	L1, L2, L4
Module -5			
Concept of Pre- engineered buildings, Design of compression and tension members of cold formed light gauge sections, Design of		10 Hours	L2, L3, L4

flexural members (Laterally restrained / laterally unrestrained).		
<p>Course outcomes: On completion of this course, students are able to</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the industrial building and the components. • Design and develop analytical skills. • Summarize the principles of Structural Design and detailing • Understands the concept of Pre- engineered buildings.

Advances in Artificial Intelligence
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER - II

Subject Code	20CSE252	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS - 04

Prerequisites:

Course objectives:

- To learn the difference between optimal reasoning Vs human like reasoning • To understand the notions of state space representation, exhaustive search, heuristic search along with the time and space complexities
- To learn different knowledge representation techniques
- To understand the applications of AI: namely Game Playing, Theorem Proving, Expert Systems, Machine Learning and Natural Language Processing

Modules	Teaching Hours	RBT Level
Module-1 Introduction: What is AI? Foundations of AI, History of AI, Agents and environments, The nature of the Environment, Problem solving Agents, Problem Formulation, Search Strategies	10 Hours	L2, L3
Module-2 Knowledge and Reasoning: Knowledge-based Agents, Representation, Reasoning and Logic, Propositional logic, First-order logic, Using First-order logic, Inference in First-order logic, forward and Backward Chaining	10 Hours	L2, L3
Module -3 Learning: Learning from observations, Forms of Learning, Inductive Learning, Learning decision trees, why learning works, Learning in Neural and Belief networks	10 Hours	L2, L3
Module -4 Practical Natural Language Processing: Practical applications, Efficient parsing, Scaling up the lexicon, Scaling up the Grammar, Ambiguity, Perception, Image	10 Hours	L3, L4

formation, Image processing operations for Early vision, Speech recognition and Speech Synthesis		
Module -5		
Robotics: Introduction, Tasks, parts, effectors, Sensors, Architectures, Configuration spaces, Navigation and motion planning, Introduction to AI based programming Tools	10 Hours	L3, L4
Question paper pattern:		
The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

STRUCTURAL HEALTH MONITORING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER - II

Subject Code	20CSE253	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS - 04

Prerequisites:

Course objectives:

1. Learn the fundamentals of structural health monitoring.
2. Study the various vibration-based techniques for structural health monitoring.
3. Learn the structural health monitoring using fiber-optic and Piezoelectric sensors.
4. Study the structural health monitoring using electrical resistance and electromagnetic techniques.

Modules	Teaching Hours	RBT Level
Module-1 Introduction to Structural Health Monitoring Definition of structural health monitoring (SHM), Motivation for SHM, SHM as a way of making materials and structures smart, SHM and biomimetics, Process and pre-usage monitoring as a part of SHM, SHM as a part of system management, Passive and active SHM,NDE, SHM and NDECS, Variety and multidisciplinaryity: the most remarkable characters of SHM, Birth of the SHM Community.	10 Hours	L2, L3
Module-2 Vibration-Based Techniques for SHM Basic vibration concepts for SHM, Local and global methods, Damage diagnosis as an inverse problem, Model-based damage assessment, Mathematical description of structural systems with damage, General dynamic behavior, Statespace description of mechanical systems, Modeling of damaged structural elements, Linking experimental and analytical data, Modal Assurance Criterion (MAC) for mode pairing, Modal Scaling Factor (MSF), Co-ordinate Modal Assurance Criterion (COMAC), Damping, Expansion and reduction, Updating of the initial model, Damage	10 Hours	

<p>localization and quantification, Change of the flexibility matrix, Change of the stiffness matrix, Strain-energy-based indicator methods and curvature modes, MECE error localization technique, Static displacement method, Inverse eigen sensitivity method, Modal force residual method, Kinetic and strain energy-based sensitivity methods, Forced vibrations and frequency response functions, Solution of the equation system, Regularization, Parameter subset selection, Other solution methods, Variances of the parameters, Neural network approach to SHM, The basic idea of neural networks, Neural networks in damage detection, localization and quantification, Multi-layer Perceptron (MLP), A simulation example, Description of the structure, Application of damage indicator methods, Application of the modal force residual method and inverse eigen sensitivity method, Application of the kinetic and modal strain energy methods, Application of the Multi-Layer Perceptron neural network, Time-domain damage detection methods for linear systems, Parity equation method, Kalman filters, AR and ARX models, Damage identification in non-linear systems, Extended Kalman filter, Localization of damage using filter banks, A simulation study on a beam with opening and closing crack, Applications, I-40 bridge,,Steelquake structure, Application of the Z24 bridge, Detection of delamination in a CFRP plate with stiffeners.</p>		
<p>Module -3</p>		
<p>Fiber-Optic Sensors Classification of fiber-optic sensors, Intensity-based sensors, Phasemodulated optical fiber sensors, or interferometers, Wavelength based sensors, or Fiber Bragg Gratings (FBG), The fiber Bragg grating as a strain and temperature sensor, Response of the FBG to uniaxial uniform strain fields, Sensitivity of the FBG to temperature, Response of the FBG to a non-uniform uniaxial strain field, Response of the FBG to transverse stresses, Photoelasticity in a plane stress state, Structures with embedded fiber Bragg gratings, Orientation of the optical fiber optic with respect to the reinforcement fibers, Ingress/egress from the laminate, Fiber Bragg gratings as</p>	<p>10 Hours</p>	<p>L2, L3</p>

<p>damage sensors for composites, Measurement of strain and stress variations, Measurement of spectral perturbations associated with internal stress release resulting from damage spread, Examples of applications in aeronautics and civil engineering, Stiffened panels with embedded fiber Bragg gratings, Concrete beam repair</p>		
<p>Module -4</p>		
<p>SHM with Piezoelectric Sensors The use of embedded sensors as acoustic emission (AE) detectors, Experimental results and conventional analysis of acoustic emission signals, Algorithms for damage localization, Algorithms for damage characterization, Available industrial AE systems, New concepts in acoustic emission, State-the-art and main trends in piezoelectric transducer-based acousto-ultrasonic SHM research, Lamb wave structure interrogation, Sensor technology, Tested structures (mainly metallic or composite parts), Acousto-ultrasonic signal and data reduction methods, The full implementation of SHM of localized damage with guided waves in composite materials, Available industrial acoustoultrasonic systems with piezoelectric sensors, Electromechanical impedance, E/M impedance for defect detection in metallic and composite parts, The piezoelectric implant method applied to the evaluation and monitoring of viscoelastic properties.</p>	<p>10 Hours</p>	<p>L2, L3</p>
<p>Module -5</p>		
<p>SHM Using Electrical Resistance Composite damage, Electrical resistance of unloaded composite, Percolation concept, Anisotropic conduction properties in continuous fiber reinforced polymer, Influence of temperature, Composite strain and damage monitoring by electrical resistance, 0° unidirectional laminates, Multidirectional laminates, Randomly distributed fiber reinforced polymers, Damage localization. Low Frequency Electromagnetic Techniques Theoretical considerations on electromagnetic theory, Maxwell's equations, Dipole radiation, Surface impedance, Diffraction by a circular aperture, Eddy currents, Polarization of dielectrics, Applications to the NDE/NDT domain, Dielectric materials, Conductive</p>	<p>10 Hours</p>	<p>L3, L4</p>

materials, Hybrid method, Signal processing, Time-frequency transforms, The continuous wavelet transform, The discrete wavelet transform, Multiresolution, Denoising, Application to the SHM domain, General principles, Magnetic method, Electric method, Hybrid method.		
---	--	--

Question paper pattern:

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

DESIGN OF TALL STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER - II

Subject Code	20CSE254	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	4:0:0	SEE Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS - 04

Prerequisites:

- Special Concrete
- Structural Dynamics

Course objectives:

The objective of this course is to make students to learn principles of stability of tall buildings, To design the tall buildings for earthquake and wind resistance. To evaluate the performance of tall structures for strength and stability

Modules	Teaching Hours	RBT Level
Module-1		
Design Criteria: Design philosophy, loading, sequential loading, and materials – high performance concrete, fiber reinforced concrete, lightweight concrete, design mixes. Loading and Movement: Gravity loading: Dead and live load, methods of live load reduction, Impact, Gravity loading, Construction loads	10 Hours	L1, L2
Module-2		
Wind loading: static and dynamic approach, Analytical and wind tunnel experimentation method. Earthquake loading: Equivalent lateral force, modal analysis, combinations of loading, working stress design, Limit state design, Plastic design.	10 Hours	L1, L3, L4, L5
Module -3		
Behavior of Various Structural Systems: Factors affecting growth, Height and structural form; High rise behavior, Rigid frames, braced frames, in-filled frames, shear walls, coupled shear walls, wall-frames, tubular, cores, Futigger – braced and hybrid mega system.	10 Hours	L2, L3
Module -4		

<p>Analysis and Design: Modeling for approximate analysis, accurate analysis and reduction techniques, analysis of building as total structural system considering overall integrity and major subsystem interaction, analysis for member forces; drift and twist, computerized general three dimensional analyses.</p>	<p>10 Hours</p>	<p>L2, L3, L4</p>
<p>Module -5</p>		
<p>Stability of Tall Buildings: Overall buckling analysis of frames, wall frames, approximate methods, second order effects of gravity of loading, P-Delta analysis, simultaneous first order and P-Delta analysis, Transnational, Torsional instability, out of plum effects, stiffness of member in stability, effect of foundation rotation. Structural elements: sectional shapes, properties and resisting capacities, design, deflection, cracking, pre-stressing, shear flow. Design for differential movement, creep and shrinkage effects, temperature effects and fire</p>	<p>10 Hours</p>	<p>L2, L3, L4, L5</p>
<p>Course outcomes: On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of strength and stability • Design and develop analytical skills. • Summarize the behavior of various structural systems. • Understand the concepts of P-Delta analysis 		
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

STRUCTURAL ENGINEERING LAB-2 [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	20CSEL26	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	1:3:0	SEE Marks	60
Total Number of Lecture Hours	42	Exam Hours	03
CREDITS – 02			
Prerequisites:			
Course objectives: The objective of this course is to make students To analyze the structure using FE based Software To learn principles of design To investigate the performance of structural elements. To design the structural components using excel sheets			
Modules		Teaching Hours	RBT Level
1. Static and Dynamic analysis and design of Multistory Building structures using any FE based software		12 Hrs	L1, L2, L3, L4, L5, L6
2. Design of RCC and Steel Tall structures using any FE based software		12 Hrs	
3. Analysis of folded plates and shells using any FE software.		06 Hrs	
4. Preparation of EXCEL sheets for structural design		12 Hrs	
Course outcomes: On complete of this course the students will able to			
<ul style="list-style-type: none"> • Achieve Knowledge of design and development of programming skills. • Understand the principles of structural analysis and design • Design and develop analytical skills. • Summarize the performance of structures for static and dynamic forces. 			

DESIGN OF BRIDGES			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	20CSE31	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 04			
Prerequisites:			
<ul style="list-style-type: none"> • Structural Analysis • Highway Engineering • Design of RC Structures 			
Course objectives:			
<ul style="list-style-type: none"> • The students will be exposed to the Engineering aspects of concrete bridges • Various loads that act on the bridges as per IRC. • Analysis for the maximum BM and SF at critical section using load distributing theories. • Design of various components using limit state method with reinforcement details. 			
Modules		Teaching Hours	RBT Level
Module-1			
Introduction & Design of Slab Culvert			
Bridge Engineering and its development in past, Ideal site selection for Bridges, Bridge classifications, Forces acting on Bridge. Analysis for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles. Structural design of slab culvert using limit state method with reinforcement details.		8 Hours	L2, L3
Module-2			
Box Culvert			
Introduction to box culvert, advantage of structural continuity, Analysis for maximum BM and SF at critical sections using moment distribution method for various load combinations such as Dead, Surcharge, Soil, Water and Live load as per IRC class A, B, AA tracked and wheeled vehicles. Structural design of box culvert using limit state method with reinforcement details.		8 Hours	L2, L3

Module -3		
<p>T Beam Bridge</p> <p>Components of T Beam Bridge, Load transfer mechanism, Proportioning the of Components, Analysis of Slab using Pigeauds Method for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles and design of Slab using limit state method with reinforcement details. Analysis of Cross Girder for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles and design of slab using limit state method with reinforcement details. Analysis of Main Girder using Courbon's Method for maximum BM and SF at critical sections for Dead and Live load as per IRC class A, B, AA tracked and wheeled vehicles and design of Main Girder using limit state method with reinforcement details.</p>	8 Hours	L3, L4
Module -4		
<p>PSC Bridge</p> <p>Introduction to Pre & Post Tensioning, Proportioning of Components, Analysis & Structural Design of Slab, Analysis of Main Girder Using Courbon's Method for IRC Class AA, Tracked vehicle, Calculations of Prestressing Force, Calculations of Stresses, Cable profile, Design of End Block, Detailing of Main Girder.</p>	8 Hours	L3, L4
Module -5		
<p>Balanced Cantilever Bridge</p> <p>Introduction & Proportioning of Components, Analysis of Main Girder Using Courbon's Method for IRC Class AA, Tracked vehicle Design of Simply Supported Portion, Cantilever Portion, Articulation, using limit state method with reinforcement details.</p>	8 Hours	L3, L4
<p>Course outcomes:</p> <p>After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Describe historical growth, select ideal site and bridge, calculate values of design parameters of slab culvert at critical section as per IRC, design and detailing required for the execution of the project. • Carry out analysis of box culvert as per IRC to obtain the values of design parameters and to design and detail the components following IS code procedure. 		

- Demonstrate the use of **Pigeauds Method** and **Courbon's Method** in the analysis of T beam bridge as per IRC, design to obtain the safe dimensions various components, optimum reinforcement required following IS code procedure.
- Display the use of **Courbon's Method** in the analysis of PSC bridge as per IRC, design to obtain the safe value of prestressing force, obtain the dimensions of various components to keep the stresses within codal provisions following IS code procedure.
- Analysis a balanced cantilever bridge as per IRC and to obtain the safe values of design parameters and to design and detail the components as per IS code procedure

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

DESIGN CONCEPTS OF SUBSTRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	20CSE321	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 03

Prerequisites:

Course objectives:

The objective of this course is to make students to learn principles of subsoil exploration, To design the sub structures. To evaluate the soil shear strength parameters.

Modules	Teaching Hours	RBT Level
Module-1		
Introduction, Site investigation, In-situ testing of soils, Subsoil exploration, Classification of foundations systems. General requirement of foundations, Selection of foundations, Computations of Loads, Design concepts.	8 Hours	L2, L4, L5
Module-2		
Concept of soil shear strength parameters, Settlement analysis of footings, Shallow foundations in clay, Shallow foundation in sand & C- Φ soils, Footings on layered soils and sloping ground, Design for Eccentric or Moment Loads	8 Hours	L2, L4, L5
Module -3		
Types of rafts, bearing capacity & settlements of raft foundation, Rigid methods, Flexible methods, soil structure interaction, different methods of modeling the soil. Combined footings (rectangular & trapezoidal), strap footings & wall footings, Raft – super structure interaction effects & general concepts of structural design, Basement slabs	8 Hours	L2, L4, L5
Module -4		
Deep Foundations: Load Transfer in Deep Foundations, Types of Deep Foundations, Ultimate bearing capacity of different	8 Hours	L2, L3, L4, L5

types of piles in different soil conditions, Laterally loaded piles, tension piles & batter piles, Pile groups: Bearing capacity, settlement, uplift capacity, load distribution between piles, Proportioning and design concepts of piles.		
Module -5		
Types of caissons, Analysis of well foundations, Design principles, Well construction and sinking. Foundations for tower structures: Introduction, Forces on tower foundations, Selection of foundation type, Stability and design considerations, Ring foundations – general concepts.	8 Hours	L2, L3, L4, L5
<p>Course outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of subsoil exploration • Design and develop analytical skills. • Identify and evaluate the soil shear strength parameters. • Understand the concepts of Settlement analysis. 		
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module.

OPTIMIZATION TECHNIQUES [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Subject Code	20CSE322	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites:			
Course objectives: The objective of this course is to make students to learn principles of optimization, To implement the optimization Concepts for the structural engineering problems. To evaluate different methods of optimization.			
Modules	Teaching Hours	RBT Level	
Module-1			
Introduction: Introduction to optimization, engineering applications of optimization, Formulation of structural optimization problems as programming problems. Optimization Techniques: Classical optimization techniques, single variable optimization, multivariable optimization with no constraints, unconstrained minimization techniques and algorithms constrained optimization solutions by penalty function techniques, Lagrange multipliers techniques and feasibility techniques.	8 Hours	L1, L2, L4	
Module-2			
Linear Programming: Linear programming, standard form of linear programming, geometry of linear programming problems, solution of a system of linear simultaneous equations, pivotal production of general systems of equations, simplex algorithms, revised simplex methods, duality in linear programming.	8 Hours	L2, L4, L5	
Module -3			
Non-linear programming: Non-linear programming, one dimensional minimization methods, elimination methods, Fibonacci method, golden section method, interpolation methods, quadratic and cubic methods, Unconstrained optimization methods, direct search methods, random search methods, descent methods	8 Hours	L2, L3, L4, L5	

Module -4		
Constrained optimization techniques such as direct methods, the complex methods, cutting plane method, exterior penalty function methods for structural engineering problems. Formulation and solution of structural optimization problems by different technique	8 Hours	L2, L3, L4, L5
Module -5		
Geometric programming: Geometric programming, conversion of NLP as a sequence of LP/ geometric programming. Dynamic programming: Dynamic programming conversion of NLP as a sequence of LP/ Dynamic programming	8 Hours	L4, L5
<p>Course outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of optimization. • Design and develop analytical skills. <ul style="list-style-type: none"> • Summarize the Linear, Non-linear and Geometric Programming • Understands the concept of Dynamic programming 		
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 		
<p>Reference Books:</p> <ol style="list-style-type: none"> 1. Spunt, “Optimum Structural Design”- Prentice Hall 2. S.S. Rao, “Optimization – Theory and Practice”- Wiley Eastern Ltd. 3. STABILITY OF STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	20CSE323	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 03

Prerequisites:

- Strength of Materials
- Finite Element Analysis
- Theory of Elasticity

Course objectives:

The objective of this course is to make students to learn principles of stability of structures, To analyse the structural elements for stability. To evaluate the use of strain energy in plate bending and stability.

Modules	Teaching Hours	RBT Level
Module-1		
Beam – Column Differential equation. Beam column subjected to (i) lateral concentrated load, (ii) several concentrated loads, (iii) continuous lateral load. Application of trigonometric series, Euler’s formulation using fourth order differential equation for pinned – pinned, fixed – fixed, fixed – free and fixed – pinned column.	8 Hours	L1, L2
Module-2		
Buckling of frames and continuous beams. Elastic Energy method: Approximate calculation of critical loads for a cantilever. Exact critical load for hinged – hinged column using energy approach. Buckling of bar on elastic foundation. Buckling of cantilever column under distributed loads. Determination of critical loads by successive approximation. Bars with varying cross section. Effect of	8 Hours	L2, L3

shear force on critical load. Column subjected to pulsating forces.		
Module -3		
<p>Stability analysis by finite element approach</p> <p>Derivation of shape function for a two noded Bernoulli-Euler beam element (lateral and translation of) – element stiffness and element geometric stiffness matrices – assembled stiffness and geometric stiffness matrices for a discretised column with different boundary condition – calculation of critical loads for a discretised (two elements) column (both ends built in). Buckling of pin jointed frames (maximum of two active DOF) – symmetrical single bay portal frame.</p>	8 Hours	L2, L3, L4
Module -4		
<p>Lateral buckling of beams</p> <p>Differential equation –pure bending – cantilever beam with tip load – simply supported beam of I section subjected to central concentrated load. Pure Torsion of thin – walled bars of open cross section. Non – uniform Torsion of thin – walled bars of open cross section.</p>	8 Hours	L1, L2, L3
Module -5		
<p>Expression for strain energy in plate bending with in plate forces (linear and non – linear).</p> <p>Buckling of simply supported rectangular plate– uniaxial load and biaxial load. Buckling of uniformly compressed rectangular plate simply supported along two opposite sides perpendicular to the direction of compression and having various edge condition along the other two sides.</p>	8 Hours	L1, L2, L3
<p>Course Outcomes:</p> <p>On completion of this course, students are able to:</p> <ul style="list-style-type: none"> • Achieve Knowledge of design and development of problem solving skills. • Understand the principles of strength and stability • Design and develop analytical skills. • Appraise the Stability analysis by finite element approach. • Understand the concepts of lateral buckling of beams. 		

Question paper pattern:

The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.

Reference Books:

1. Stephen P. Timoshenko, James M Gere, "Theory of Elastic Stability"-2nd Edition, McGraw – Hill, New Delhi.
2. Robert D Cook et.al, "Concepts and Applications of Finite Element Analysis"-3rd Edition, John Wiley and Sons, New York.
3. S. Rajashekar, "Computations and Structural Mechanics"-Prentice – Hall, India.
4. Ray W Clough and J Penzien, "Dynamics of Structures" - 2nd Edition, McGraw Hill, New Delhi
5. H.Zeiglar, "Principles of Structural Stability"-Blaisdall Publications

RELIABILITY ANALYSIS OF STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	20CSE324	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 03**Prerequisites:****Course objectives:**

1. To impart the concept knowledge on data analysis and probability in the context of structural engineering.
2. To demonstrate uncertainty in structural engineering with respect to randomness of variables and knowledge of probability distributions.
3. To demonstrate principles of structural reliability in order to assess safety due to randomness of variables.
4. To perform computations of structural reliability using various methods at component and system level.

Modules	Teaching Hours	RBT Level
Module-1		
Preliminary Data Analysis: Graphical representation- Histogram, frequency polygon, Measures of central tendency- grouped and ungrouped data, measures of dispersion, measures of asymmetry. Curve fitting and Correlation: Fitting a straight line, curve of the form $y = ab^x$, and parabola, Coefficient of correlation.	8 Hours	L2, L3,L4
Module-2		
Probability Concepts: Random events-Sample space and events, Venn diagram and event space, Measures of probability interpretation, probability axioms, addition rule, multiplication rule, conditional probability, probability tree diagram, statistical independence, total probability theorem and Baye's	8 Hours	L2, L4

theorem..		
Module -3		
<p>Random variables:</p> <p>Probability mass function, probability density function, Mathematical expectation, Chebyshev's theorem. Probability distributions: Discrete distributions- Binomial and Poisson distributions, Continuous distributions- Normal, Log normal distributions.</p>	8 Hours	L2, L4
Module -4		
<p>Reliability Analysis:</p> <p>Measures of reliability-factor of safety, safety margin, reliability index, performance function and limiting state. Reliability Methods-First Order Second Moment Method (FOSM), Point Estimate Method (PEM), and Advanced First Order Second Moment Method (Hasofer-Lind's method).</p>	8 Hours	L2, L3,L4,L5
Module -5		
<p>Simulation Techniques:</p> <p>Monte Carlo simulation- Statistical experiments, Confidence limits ,sample size and accuracy, Generation of random numbers- random numbers with standard uniform distribution, continuous random variables (normal and lognormal), discrete random variables. System reliability: series, parallel and combined systems.</p>	8 Hours	L2,L3,L4 L5
<p>Course Outcomes: Students will be able to</p> <ol style="list-style-type: none"> 1. Understand the concepts of statistics for probabilistic analysis and importance of uncertainty (randomness) in structural analysis and design. 2. Apply the theoretical principles of randomness of variables in structural engineering through density functions. 3. Analyze components of structure to assess safety using concepts related to structural reliability by various methods. 4. Evaluate the safety reliability index at system level. 		
<p>Question paper pattern:</p> <p>The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

FRACTURE MECHANICS APPLIED TO STRUCTURAL ENGINEERING			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – III			
Subject Code	20CSE331	CIE Marks	40
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites: Concrete Technology and Mechanics of Deformable Bodies			
Course objectives: This course will enable students to			
<ol style="list-style-type: none"> 1. To compute the stress intensity factor, strain energy release rate and the stress and strain fields around a crack tip for linear and nonlinear materials. 2. Know experimental methods to determine the fracture toughness. 3. Use the design principles of materials and structures using fracture mechanics approach. 			
Modules		Teaching Hours	RBT Level
Module-1			
Stress concentration in elastic materials			
Theory of stress concentration in elastic materials, stress concentration factors around circular and elliptic holes. Influence of ratio of radii on stress concentration factor in elliptic hole.		8 Hours	L1,L2
Module-2			
Linear Elastic Fracture mechanics			
Modeling a crack as a flat elliptic hole by Inglis and the limitations of the model, Griffith theory of brittle fracture Theories of linear elastic fracture mechanics, stress intensity factors, Irwin's definition. Fracture toughness K_{Ic} , K_{IIc} , K_{IIIc} & corresponding values of GC.		8 Hours	L2,L3
Module -3			
Elasto-plastic fracture mechanics			
Crack-tip plasticity in metals. Irwin's modification for elasto-plastic material. J integral, CMOD, CTOD. Mixed mode problems and evaluation of critical fracture parameters.		8 Hours	L2,L3,L4

Module -4		
<p>Fracture of Concrete</p> <p>Limitations of theories of linear elastic fracture mechanics in concrete, Review of concrete behaviour in tension and compression.</p> <p>Kaplan's experiments, concept of fracture energy, definition of a quasi-brittle material, concept of softening.</p>	8 Hours	L2,L3,L4
Module -5		
<p>Advanced concepts in fracture behavior of concrete</p> <p>Definition of fracture energy by RILEM, Influence of size on fracture behavior, Bazant's size effect law.</p> <p>Size dependent & independent fracture energies. Application of fracture mechanics in design of concrete structures.</p>	8 Hours	L2,L3,L4
<p>Course outcomes:</p> <p>After studying this course, students will be able to:</p> <ul style="list-style-type: none"> • Apply principles of fracture mechanics. • Design concrete structures using fracture mechanics approach. • Explain the importance of fracture mechanics. • Take special care of very large sized structures. 		
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module.

DESIGN OF MASONRY STRUCTURES				
[As per Choice Based Credit System (CBCS) scheme]				
SEMESTER – III				
Subject Code	20CSE332	CIE Marks	40	
Number of Lecture Hours/Week	03	SEE Marks	60	
Total Number of Lecture Hours	40	Exam Hours	03	
CREDITS – 03				
Prerequisites: Construction Technology and Strength of Materials				
Course objectives:				
<p>The objective of this course is to make students</p> <ul style="list-style-type: none"> • To learn performance of masonry structures, • To design the masonry structures for earthquake resistance. • To evaluate the strength and stability of the masonry structures 				
Modules			Teaching Hours	RBT Level
Module-1				
<p>Introduction, Masonry units, materials and types:</p> <p>History of masonry, Masonry units – Brick- Types of bricks, Tests conducted on bricks. Other masonry units - stone, clay block, concrete block, laterite block, stabilized mud block masonry units Masonry materials – Classification and properties of mortars, selection of mortars. Cracks - Cracks in masonry structures, Type of crack, causes and prevention of crack.</p>			8 Hours	L1,L2
Module-2				
<p>Strength of Masonry in Compression:</p> <p>Behaviour of Masonry under compression, strength and elastic properties, influence of masonry unit and mortar Characteristics, effect of masonry unit height on compressive strength, influence of masonry bonding patterns on strength, prediction of strength of masonry in Indian context, Failure theories of masonry under Compression. Effects of slenderness and eccentricity, effect of rate of absorption, effect of curing, effect of ageing, workmanship on compressive strength</p>			8 Hours	L2,L3
<p>Masonry Bond Strength and Masonry in Shear and Flexure</p> <p>Bond between masonry unit and mortar, tests for determining flexural and shear bond strengths, factors affecting bond</p>				

strength, effect of bond strength on compressive strength, orthotropic strength properties of masonry in flexure, shear strength of masonry, test procedures for evaluating flexural and shear strength		
Module-3		
<p>Design of load bearing masonry wall</p> <p>Permissible stresses: Types of walls, permissible compressive stress, stress reduction and shape modification factors, increase in permissible stresses for eccentric vertical and lateral load, permissible tensile stress and shear stresses. Design Considerations: Effective height of walls and columns, openings in walls, effective length, effective thickness, slenderness ratio, eccentricity, load dispersion, arching action in lintels. Problems on design considerations for solid walls, cavity walls, wall with pillars.</p> <p>Load considerations and design of Masonry subjected to axial loads: Design criteria, design examples of walls under UDL, solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers.</p>	8 Hours	L2,L3, L4,L5
Module-4		
<p>Design of walls subjected to concentrated axial loads: Solid walls, cavity walls, solid wall supported at the ends by cross wall, walls with piers, design of wall with openings. Design of walls subjected to eccentric loads: Design criteria – stress distribution under eccentric loads – problems on eccentrically loaded solid walls, cavity walls, walls with piers.</p> <p>Design of Laterally and transversely loaded walls: Design criteria, design of solid wall under wind loading, design of shear wall – design of compound walls.</p>	8 Hours	L2,L3, L4,L5
Module-5		
<p>Earthquake resistant masonry buildings:</p> <p>Behaviour of masonry during earthquakes, concepts and design procedure for earthquake resistant masonry, BIS codal provisions. In-filled frames: Types – modes of failures</p> <p>Reinforced brick masonry</p> <p>Methods of reinforcing Masonry, Analysis of reinforced Masonry under axial, flexural and shear loading</p>	8 Hours	L2,L3, L4,L5

On completion of this course, students are able to:

- Achieve Knowledge of design and development of problem solving skills.
- Understand the principles of design and construction of masonry structures
- Design and develop analytical skills.
- Summarize the masonry Characteristics.
- Evaluate the strength and stability of the masonry structures.

Reference book

- Henry, A.W., “Structural Masonry”, Macmillan Education Ltd., 1990.

- M. L. Gambhir, “Building and Construction Materials”, Mc Graw Hill education Pvt. Ltd.

Guidelines

- IS 1905–1987 “Code of practice for structural use of un-reinforced masonry- (3rd revision) BIS, New Delhi.
- SP 20 (S&T) – 1991, “Hand book on masonry design and construction (1st revision) BIS, New Delhi.

Question paper pattern:

- The question paper will have ten questions.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

RETROFITTING AND REHABILITATION OF STRUCTURES

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	20CSE333	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 03**Prerequisites:****Course objectives:**

1. Learn the fundamentals of maintenance and repair strategies.
2. Study the quality assurance, serviceability and durability of concrete.
3. Know the various materials and techniques used for repair of structures.
4. Educate the different repair, strengthening, rehabilitation and retrofitting techniques.
5. Instruct the various health monitoring and demolition techniques.

Modules	Teaching Hours	RBT Level
Module-1		
Maintenance: Repair and Rehabilitation, Facets of Maintenance, importance of Maintenance various aspects of Inspection, Assessment procedure for evaluating damaged structure, causes of deterioration. Repair Strategies: Causes of distress in concrete structures, Construction and design failures, Condition assessment and distress-diagnostic techniques, Assessment procedure for Inspection and evaluating a damaged structure,	8 Hours	L2, L3
Module-2		
Serviceability and Durability of Concrete: Quality assurance for concrete construction, concrete properties – strength, permeability, thermal properties and cracking. – Effects due to climate, temperature, chemicals, corrosion – design and construction errors – Effects of cover thickness and cracking.	8 Hours	L2, L3
Module -3		
Materials and Techniques for Repair: Special concretes and	8 Hours	L2, L3

<p>mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, Sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete. Bacterial concrete, Rust eliminators and polymers coating for rebars during repair, foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shotcrete, Epoxy injection, Mortar repair for cracks, shoring and underpinning. Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coating and cathodic protection</p>		
<p>Module -4</p>		
<p>Repair, Rehabilitation and Retrofitting Techniques: Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure, Repair of Structure – Common Types of Repairs – Repair in Concrete Structures – Repairs in Under Water Structures – Guniting – Shot Create – Underpinning. Strengthening of Structures – Strengthening Methods – Retrofitting – Jacketing.</p>	<p>8 Hours</p>	<p>L2, L3</p>
<p>Module -5</p>		
<p>Health Monitoring and Demolition Techniques: Long term health monitoring techniques, Engineered demolition techniques for dilapidated structures, Use of Sensors – Building Instrumentation.</p>	<p>8 Hours</p>	<p>L3, L4</p>
<p>Question paper pattern:The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.</p>

GREEN BUILDING TECHNOLOGY [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Subject Code	20CSE334	CIE Marks	40
Number of Lecture Hours/Week	03	SEE Marks	60
Total Number of Lecture Hours	40	Exam Hours	03
CREDITS – 03			
Prerequisites:			
Course objectives:			
<ol style="list-style-type: none"> 1. Exposure to the green building technologies and their significance. 2. Understand the judicious use of energy and its management. 3. Educate about the Sun-earth relationship and its effect on climate. 4. Enhance awareness of end-use energy requirements in the society. 5. Develop suitable technologies for energy management. 			
Modules		Teaching Hours	RBT Level
Module-1			
Overview of the significance of energy use and energy processes in building - Indoor activities and environmental control - Internal and external factors on energy use and the attributes of the factors - Characteristics of energy use and its management - Macro aspect of energy use in dwellings and its implications.		8 Hours	L2, L3
Module-2			
Indoor environmental requirement and management - Thermal comfort - Ventilation and air quality - Air-conditioning requirement - Visual perception - Illumination requirement - Auditory requirement.		8 Hours	L2, L3
Module -3			
Climate, solar radiation and their influences - Sun-earth relationship and the energy balance on the earth's surface - Climate, wind, solar radiation, and temperature - Sun shading and solar radiation on surfaces - Energy impact on the shape and orientation of buildings.		8 Hours	L3, L4

Module -4		
End-use, energy utilization and requirements - Lighting and day lighting - End-use energy requirements - Status of energy use in buildings Estimation of energy use in a building. Heat gain and thermal performance of building envelope - Steady and non steady heat transfer through the glazed window and the wall - Standards for thermal performance of building envelope - Evaluation of the overall thermal transfer	8 Hours	L3, L4
Module -5		
Energy management options - Energy audit and energy targeting - Technological options for energy management.	8 Hours	L3, L4
Question paper pattern:		
The question paper will have ten questions; each question carries equal marks, there will be two full questions or with a maximum of four sub questions from each module, students will have to attend five full questions from each module.
